Registering an eRA Commons Account

Assuming that we do not already have an eRA Commons account, we will need to provide the following information:

Summary of Steps to Register

Step 1 — Specify Purpose: On the *Registration Purpose* screen, the SO will specify the purpose for registering – whether the institution is registering for an NIH grant/contract; a non-NIH grant/contract or an Other Transaction. If applying for NIH grants/contracts, the SO will be asked to acknowledge having read the relevant section of the NIH Grants Policy statement on the legal implications of applications, but those seeking Other Transactions (OTs) as well as eRA partners skip that acknowledgement; see Figure 1.

Step 2 — Verify Identification: On the *Verify Identification* screen, the SO enters the Unique Entity Identifier (UEI) if NIH or Non-NIH Grants was chosen as the purpose of registration on prior screen; see Figure 2. Once entered, the SO clicks a **Verify** button (which checks to see if the identifier has been registered in Sam.gov) before the SO moves on to enter additional data.

Step 3 — Enter Contact Details: On the *Institution Details* screen, the SO will specify institution information and contacts. Note that if the SO enters the UEI and the institution's full SAM.gov registration is active, the information will be populated from the institution's SAM account. The SO will need to enter emails where the Closeout Email and Notice of Award (NoA) communications should be sent.

Step 4 — Create Accounts: On the *Accounts* screen, the SO will create an initial Commons account for the SO and a second one optionally for the account administrator.

Step 5 — Review & Submit: The SO will look over the information and submit the request to the agency for processing. The SO will receive an email to verify the email address (the SO has 8 days to respond or the request is canceled) Once verified, a message will appear on the screen confirming that the registration request was successfully submitted. Subsequent emails will be sent by eRA to the SO about the status of the registration.

- **Receive Temporary Password:** Once the request is approved, the SO will receive emails with a username and temporary password that is valid for two days. The SO will use the credentials received in the emails to [log into eRA Commons](#)[¶] and will receive a prompt to change the temporary password.
- **Log in and Confirm Registration:** The SO will then log into eRA Commons, review and confirm the institution registration request. At that point, the institution is active in eRA Commons and the SO can affiliate, create and maintain additional accounts as needed.

The above information can be found at [this link](#). There are a few screenshots on this page that further explain the process.

Logging In

Once you have an eRA Commons account, you can log into the page at [this page](#).

Requesting Access

You will need to submit a DAR (Data Access Request). Below is a useful YouTube video I found from the National Library of Medicine that should walk you through everything. Note that this video is 12 years old, so it is very possible that some parts of it are outdated. I could not really find much else about the DAR without having direct access to it.
